

Appendix K

MANUFACTURING YOUTH APPRENTICESHIP

PRODUCTION PATHWAY ASSEMBLY AND PACKAGING (UNIT 4)

Unit 4: Production Pathway Assembly and Packaging

Competency

1. Read technical drawings and work orders

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

- Review technical drawing
- Gather reference materials as needed
- Determine type of print and views used
- Determine material specifications
- Determine critical dimensions and tolerances
- Analyze supplementary data
- Determine product or job instructions and specifications
- Interpret assembly and packaging symbols and procedures***

Learning Objectives

- Explain the need for technical drawings, also known as blueprints, schematics, part prints, or engineering drawings
- Explain how technical drawings detail work piece design parameters, lay out and specifications
- Explain how product design and production are related
- Discuss different types of technical drawings
- Identify terminology related to technical drawings
- Describe how to interpret views, projections and elements from a technical drawing
- Identify common terms, components, revisions, symbols, assembly sequence, dimensions, tolerances, scale, and list of materials from technical drawings or work orders

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

2. Interpret assembly and packaging symbols and procedures

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

- Interpret technical drawings accurately as needed for job task
- Use appropriate terminology
- Identify lines, views, symbols, and representations on the drawings
- Interpret dimensions, tolerances, and scale on the drawings
- Interpret threads, tapers, and shop notes on the drawings
- Interpret the assembly and packaging plan from a technical drawing which includes tools, equipment, speeds, feeds, fixtures and holders as applicable

Learning Objectives

- Define and explain the use of lines, views, symbols, dimensions, scale, and tolerances on technical drawings
- Identify different lines by name, type, order of usage, and application such as object, hidden, center, section, dimension, extension, cutting plane, short break, long break, phantom
- Demonstrate standard view placement practices
- Compare pictorial format, orthographic projection, sectional views, and detail schedules
- Discuss the standards for assembly and packaging document lines
- Describe the standard usage of metric (SI) linear units in assembly drafting
- Identify and interpret assembly drawings as to type, part name, part number, callouts, components, and part size dimensions
- Determine the relationship of one part to another from assembly drawings
- Determine procedure number cross-references to technical drawings

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

3. Identify set up for assembly

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

Locate and review applicable technical drawings, work orders, and/or procedures for assembly processing

Plan sequencing, tools, and equipment needed for assembly

Identify set up needed

Consult with worksite professional to verify assembly schedule, deadlines, and timeframes

Learning Objectives

Describe how an assembly plan is developed from a technical drawing for process, equipment, tools, and holders

Explain how product design and the assembly are related

Identify terminology related to assembly and packaging

List characteristics of major types of assembly systems

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

4. Select tools and materials

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

- Select tools and assembly equipment to be used
- Check assembly pieces needed against work order
- Verify assembly pieces and materials meet specifications
- Gather all resources needed at the workstation
- Notify worksite professional of any discrepancies

Learning Objectives

- List the various tools and equipment used in assembly and packaging at your worksite
- Outline applications of each tool and equipment
- Describe and demonstrate the safety requirements and safeguards for each tool and equipment
- Explain the importance of pieces and materials meeting specifications prior to assembly

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

5. Perform safety checks

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

- Review assembly procedure to be used
- Review safety requirements of assembly procedure
- Verify safety equipment and any Personal Protective Equipment (PPE) needed for assembly process
- Inspect tools and work area for safety considerations
- Examine assembly equipment labeling and safeguarding

Learning Objectives

List the types of labeling used on tools and equipment at your facility to indicate whether a tool or piece of equipment is functional and safe to use

List the situations which require you to obtain help to resolve problems with equipment or production

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

6. Perform assembly set up

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

- Assemble and adjust tools and assembly equipment as required
- Verify assembly equipment is available for use and in working order
- Verify assembly equipment is current for preventative maintenance and/or calibration
- Set assembly equipment parameters as required for the procedure
- Stage pieces and materials for assembly

Learning Objectives

- List the types of labeling used on tools and equipment at your facility to indicate whether a tool or piece of equipment is functional and safe to use
- Explain the purpose and importance of preventative maintenance and calibration
- List the situations which require you to obtain help to resolve problems with equipment or production

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

7. Verify assembly set up

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

- Verify set up meets assembly requirements and product specifications
- Examine first assembled final product for visual and/or dimensional specification
- Make adjustments to ensure final assembly meets specification if needed
- Verify repeatability of set up if applicable
- Document assembly set up procedure for repeatability if applicable
- Document start up/set up procedure if required

Learning Objectives

- Define repeatability
- Describe the importance of repeatability in manufacturing

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

8. Perform assembly

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

- Operate assembly equipment safely in the manner required for the job task
- Operate assembly equipment according to machine requirements
- Wear the required Personal Protective Equipment (PPE) at all times as required for the operation of the equipment
- Monitor equipment for safe operation while operating
- Inspect final assembled product
- Make adjustments to ensure assembled product meets specification if needed
- Document assembly procedure

Learning Objectives

- Describe the assembly procedure
- Describe advantages and limitations of automated assembly
- List the safety rules associated with automated production and assembly systems
- List the situations which require you to obtain help to resolve problems with equipment or production

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

9. Perform quality checks

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

- Test assembled product for function and/or compliance
- Label assembled products for compliance or non-compliance
- Document quality control checks

Learning Objectives

- Describe the uses of assembly and packaging data
- List the quality checks performed as part of the assembly and packaging process
- Explain why products are tested for quality and function
- Explain why labeling and documentation are part of the quality check

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

10. Build packaging

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

- Verify testing of assembled product(s) is complete
- Identify package needed
- Assemble package
- Inspect package
- Stage finished package

Learning Objectives

- Identify the federal agencies that regulate packaging
- Identify the basic aspects of packaging regulated by federal agencies
- Explain why it is important to inspect the package after construction
- Explain how product design and the packaging are related
- List the situations which require you to obtain help to resolve problems with equipment or production

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

11. Package product

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

- Verify proper packaging procedure
- Retrieve packaging
- Use protective packaging materials as required
- Use packaging methods that keep returns and claims for damaged and improperly packaged goods to a minimum
- Place final compliant product in packaging
- Seal package
- Inspect sealed packaging for all relevant information against the work order
- Handle package as required to prevent damage
- Labeling meets regulatory and safety regulations
- Package meets package and shipping specifications

Learning Objectives

- Explain how customer shipping instructions determine packing requirements
- Explain how packing materials determine packing requirements
- Compare packing materials to determine the safest and most cost-effective method of shipping
- List the situations which require you to obtain help to resolve problems with equipment or production

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

12. Process packaging documents

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

Verify packaging documentation such as manuals, packing slips, warranties, inspection labels, start up instructions, are included and match the final packaged product as required

Apply all required documentation such as shipping tags as required

Handle package as required to prevent damage

Communicate package availability to proper parties in a timely manner

Documentation is legible

Documentation is complete

Documentation is in appropriate format

Documentation is stored or forwarded as required

Package is correctly stored or staged

Learning Objectives

Describe the importance of documenting the packaging process

State the purpose of an inspection label

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

13. Clean up

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

- Select appropriate cleaning tools and equipment
- Clean assembly and packaging tools/equipment as required
- Clean work area as required
- Store tools in proper location
- Store materials in safe manner
- Identify unsafe conditions and reports them promptly
- Take corrective action to correct unsafe conditions
- Ensure that workstation is clean and clear of safety hazards
- Ensure workstation is organized for efficiency
- Dispose of waste appropriately as required

Learning Objectives

Describe the cleaning procedures and materials used for the specific processes you perform

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

14. Monitor equipment for correct operation

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

- Review equipment quality measures for trends and problems as required
- Compare current equipment performance to optimal equipment operations on a regular basis
- Report any noted deviations from expected performance
- Ensure that equipment is properly labeled and pulled from production use if inoperative
- Assist worksite professional to investigate abnormal equipment conditions in a timely manner
- Assist worksite professional to follow up on repaired equipment to ensure that that corrective action solved the problem
- Document all monitoring activities

Learning Objectives

- Explain the meaning of common alarms on equipment at your facility
- Explain how to read and review repair history records
- Describe how trends for malfunctioning equipment might appear in production records
- List the tools and equipment at your facility that must be monitored and maintained
- Define Total Productive Maintenance (TPM)
- Describe common electrical systems reliability issues including power supply connections, operations, series and parallel circuit function, circuit breaker function, electric motor control, and power overload
- Describe common pneumatic system reliability issues including pressure gage readings, conductors, connectors, seals, gaskets, packing, quick-connect fittings, pneumatic cylinder and motor operations, air muffler operations, actuator power output, and pressure regulator operations
- Describe common hydraulic system reliability issues including seals, gaskets, packing, and hydraulic fluids
- Describe common automated machine reliability issues including computerized control processes, logic control circuits, solenoid-operated fluid power valves, electromechanical limit switches, time delay devices, manual controls, and interlock circuits

Comments:

Unit 4: Production Pathway Assembly and Packaging

Competency

15. Document equipment use and/or operational problems

Performance Standard Condition

Competence will be demonstrated
at the worksite

Performance Standard Criteria

Performance will be successful when learners:

- Verify all internal and external communication with appropriate parties in a timely manner
- Communicate maintenance and repair needs clearly
- Use the correct reporting formats for communication
- Document use, maintenance, and repair activities accurately
- Report back and document any maintenance and repair issues in a timely manner
- Maintenance communication is timely and accurate
- Maintenance communication is documented

Learning Objectives

- Explain the uses of equipment data
- Discuss how to schedule repair and maintenance functions with respect to production requirements and production levels
- Explain how communication for repair and maintenance issues demonstrates a knowledge of customer and business needs
- List the parties that need to be involved of repair and maintenance issues
- Describe the importance of documenting communications

Comments:
